

# MATH3424 - Regression Analysis

## Project

### Important dates

- Each student should submit via Canvas ON or BEFORE **11:59pm of 20 December**.
- Severe penalty for late submission, say **10%** of marks deduction per hour, will be applied.

### Guideline

- You are allowed to use any software to perform data analysis.
- MS WORD is preferable for the report.
- Page limitation: At most 6 pages including your name, title, a short summary, background information, objective, methodology, result, conclusion, tables and figures.

### Caution

- You are expected to handle this project by yourself. For all (mostly) identical reports, marks will be calculated as the highest mark of all (mostly) identical reports divided by the number of students in the group.
- As this project is a part of assessment, finding/hiring someone to do the project on your behalf are strictly prohibited. You are considered as cheating if we detect that your report is not done by you.
- All academic works are central to HKUST Academic Honor Code. If students are caught cheating, they will get a **ZERO** mark immediately and sanctions will be imposed.
